

# BYK Additives

## Everything runs as it should

Several million bicycles are manufactured annually throughout the world. In production circles, bikes and BYK are virtually mentioned in the same breath. That's because, during production, not only great attention is paid to trouble-free technology, but also to perfect coating of the frame and fork. With its additives for powder coatings, BYK has the unique know-how to guarantee an optimum coating surface and to improve, for example, the scratch resistance of the applied coating. No wonder, then, that BYK is very much in demand when it comes to powder coatings.
